Recommendations

- Focus on profitable categories and sub-categories while investigating products with repeated losses.
- Review high-discount transactions because heavy discounting can reduce or reverse profitability.
- Compare regional profit, not only sales, before allocating inventory and marketing budgets.
- Use customer-segment profitability to target promotions toward high-value segments.
- Monitor shipping-mode usage together with order value and service expectations.
- Track monthly sales and profit together so revenue growth is not mistaken for healthy profitability.

Note: Sales in the supplied Superstore dataset already represent the recorded sales amount. Discount is stored as a fraction (for example 0.20 = 20%).
